SRS BASELINE

SRS v1.0 §4.1.3

This document is confidential and prepared exclusively for Alsultania Travel and Tourism Co. L.L.C and AnyMatch Technologies Private Limited.

Purpose

This document explains how a travel inquiry moves through the CRM from first capture to a confirmed booking. It summarises the six pipeline stages, allowed status changes, entry points, and key agent actions defined in the Phase 0 blueprint.

Overview

Every lead in the Alsultania CRM is tracked through a **six-stage pipeline**. Agents see this pipeline as a Kanban board on the **Pipeline** screen and as a status badge on each **Lead Detail** page.

All new leads — whether created by staff, submitted on the public website, or captured from WhatsApp — start at **New**.

Lifecycle diagram

Key callouts

- **New** — Public website inquiries are automatically assigned to the next available active agent (round-robin).
- **Booked** — The agent converts the lead to a customer and creates a Draft booking. The lead lifecycle ends here; the booking lifecycle continues separately.

Pipeline stages

Stage	Meaning	Typical agent action
New	Lead just created; awaiting first contact	Review assignment, open Lead Detail, make first outreach (call or WhatsApp)
Contacted	Agent has reached the customer	Gather requirements, send follow-up, prepare quotation
Quoted	Quotation sent to the customer	Follow up on the quote; if rejected, move to Negotiation to discuss revised terms rather than closing as Lost
Negotiation	Customer is discussing terms or price	Negotiate package, dates, or pricing; send a revised quote (returns to Quoted), close as Booked , or mark Lost
Booked	Deal won; ready for customer and booking setup	Convert to customer, create linked Draft booking
Lost	Lead closed without conversion	Record reason in notes; no further pipeline action

Allowed status transitions

Status is not a free-text field. The system only permits moves that follow the pipeline rules below.

From	Can move to
New	Contacted, Lost
Contacted	Quoted, Lost
Quoted	Negotiation, Booked
Negotiation	Quoted, Booked, Lost
Booked	<i>(terminal — convert to customer/booking)</i>

Invalid jumps (for example, moving directly from **New** to **Quoted**) are blocked so pipeline reporting stays accurate.

How leads enter the pipeline

Entry path	What happens
Staff	Agent creates a lead from the Dashboard, Leads List, Pipeline, or WhatsApp Inbox. Status defaults to New . Assignment follows the agent's Lead Handling choice (handle myself, create for another agent, or transfer).
Public website	Customer verifies their phone with a one-time SMS code, completes the inquiry form, and submits. Status is set to New , <code>lead_via</code> is Website, and the lead is auto-assigned to the next available agent. The customer sees a confirmation reference only.
WhatsApp	An inbound WhatsApp message is captured in the inbox. The agent creates or links a lead from the conversation. Status starts at New .

End of the lead lifecycle

When a lead reaches **Booked**:

1. The agent **converts the lead to a Customer** (if one does not already exist).
2. The agent **creates a linked Draft Booking** — lead fields prefill the booking form.
3. The lead lifecycle is complete. The booking then moves through its own status flow (Draft → Confirmed → In Progress → Completed, or Cancelled).

The system prompts the agent to create a booking when saving **Booked** if no booking is linked yet.

Where agents work

Screen	Role in the lifecycle
Pipeline	Kanban view of all six stages; drag leads to update status
Lead Detail	View profile, change status, activity timeline, send WhatsApp, create quotation, convert to customer
Leads List	Search and filter leads by status; bulk assignment for managers

The interactive HTML prototype is available separately for blueprint review and sign-off.

Related automations

Rule	What it does
AUTO-02	Auto-assigns public website inquiries to the next available active agent on creation
AUTO-04	Sends WhatsApp notifications to the agent and customer when lead status changes (<i>Phase 3 — Automation module</i>)
Activity timeline	Every status change is logged on Lead Detail alongside messages, assignments, and notes

Delivery scope

Lead lifecycle management — capture, pipeline, status tracking, and WhatsApp-integrated follow-ups — is delivered in **Phase 1: Core CRM** (Screens 01–12).

Full functional requirements: **Software Requirements Specification (SRS)** §4.1.3 Advanced Lead Management (companion PDF).
